

NET CARBON ZERO STATEMENT

Responsibility for the environment is one of Orion's guiding principles. Orion has set an ambitious target for reducing its GHG emissions, and its goal is to achieve Net Zero Carbon by 2040

Orion's sustainability agenda covers the environment. For years, Orion has worked to reduce its carbon footprint, and this work has proven effective with year-on-year reductions in our carbon footprint.

Orion's commitment is to continue its implementation of energy efficiency projects to reduce its energy and carbon dioxide emissions.

The plan is to:

1. Reduce more: By recycling our paper, plastic, and other materials, we will continue to help to reduce waste and lessen the impact on the environment.
2. Reduce waste: By making less waste or managing it more efficiently to ensure less of it going to landfill.
3. Put a net zero plan in place, consult and train our staff on our company policies, and promote our green achievements to customers and suppliers.
4. Use electricity from renewable sources: not only will this lower our carbon emissions, but it can help us prepare for environmental laws and regulations that may come into force in the future.
5. Drive less, or switch to electric cars: Over a quarter of the UK's total carbon emissions are due to petrol- and diesel-powered transport, we will encourage our staff to walk, cycle or use public transport, and make the move to all company cars being low emissions or electric.
6. Cut down on packaging: Aim to use natural, recyclable, and recycled materials.
7. Make our supplier chain greener: By using suppliers that are lowering their own carbon emissions, and by buying products that take less energy to make, transport and use, we can reduce our business's supply chain emissions.
